Transitions in CSS

The CSS properties that allow you to define how an HTML element transitions between states

transition-delay

In collection: [Transitions](#) [Permalink](#) [Share](#) [Can I use](#) [MDN](#)

Defines how long the transition has to wait before **starting**.

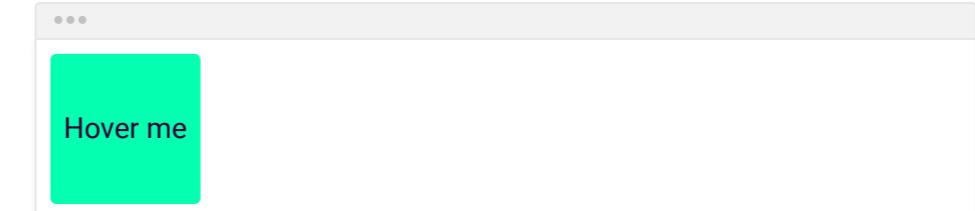

`transition-delay: 0s;`

`default`

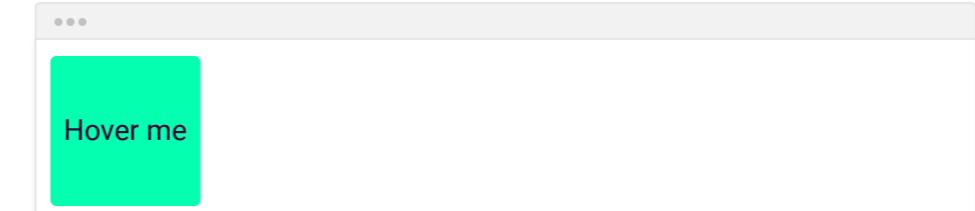

The transition will wait **zero seconds**, and thus start right away.

`transition-delay: 1.2s;`

You can use **decimal** values in **seconds** with the keyword `s`.

`transition-delay: 2400ms;`

You can use **milliseconds** instead of seconds, with the keyword `ms`.

`transition-delay: -500ms;`

You can use **negative values**: the transition will start as if it had already been playing for

transition-duration

Defines how long the transition lasts.

`transition-duration: 0s;`

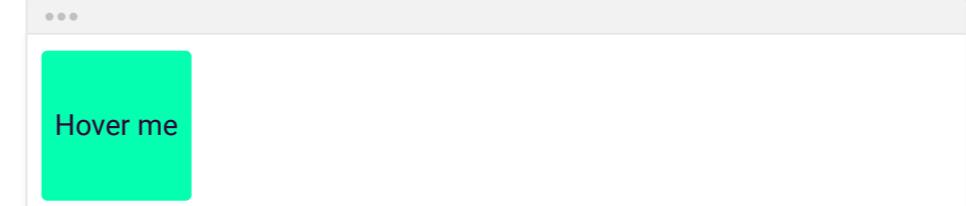

default

The transition will last **zero seconds**, and is thus **instant**.

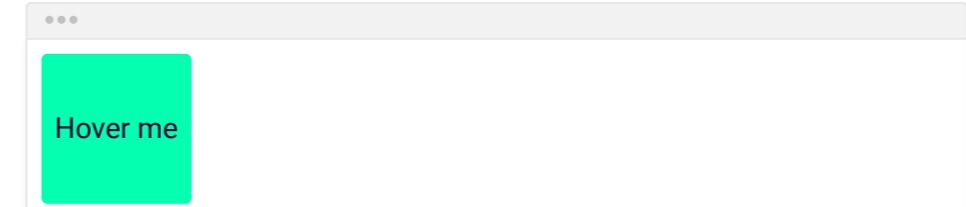

`transition-duration: 1.2s;`

You can use **decimal** values in **seconds** with the keyword `s`.

`transition-duration: 2400ms;`

You can use **milliseconds** instead of seconds, with the keyword `ms`.

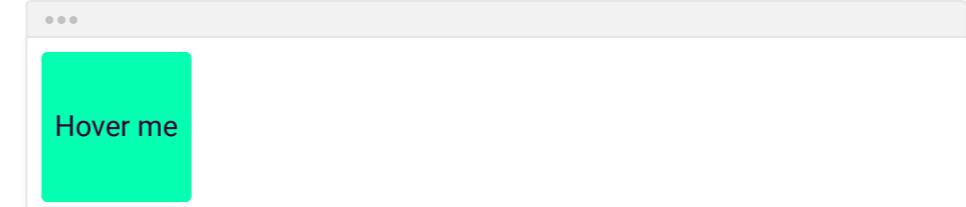

transition-property

Defines which properties will transition.

`transition-property: all;`

default

The element will transition **all** properties:

- background
- color
- transform

 transition

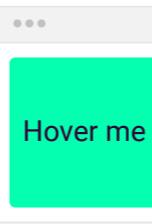

`transition-property: background;`

The element will only transition the **background** property.

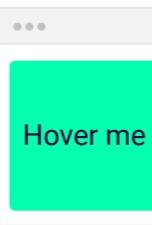

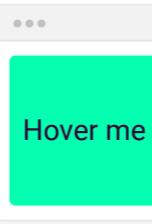

`transition-property: color;`

The element will only transition the **color** property.

`transition-property: transform;`

The element will only transition the **transform** property.

transition-timing-function

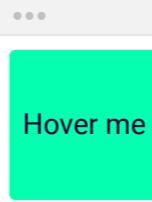

In collection: [Transitions](#) [Permalink](#) [Share](#) [Can I use](#) [MDN](#)

Defines how the values between the *start* and the *end* of the transition are calculated.

`transition-timing-function: ease;`

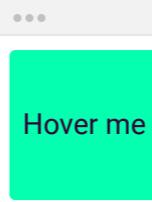

default

The transition starts slowly, accelerates in the middle, and slows down at the end.

`transition-timing-function: ease-in;`

The transition starts slowly, and accelerates gradually until the end.

`transition-timing-function: ease-out;`

...

transition

`transition-timing-function: ease-in-out;`

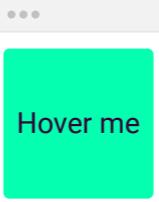

Like `ease`, but more pronounced.

The transition starts quickly, and decelerates gradually until the end.

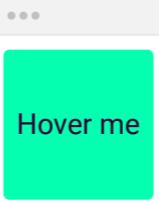

`transition-timing-function: linear;`

The transition has a **constant speed*.

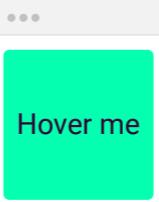

`transition-timing-function: step-start;`

The transition jumps *instantly* to the **final state**.

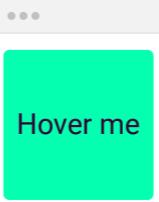

`transition-timing-function: step-end;`

The transition stays at the **initial state** until the end, when it *instantly* jumps to the **final state**.

`transition-timing-function: steps(4, end);`

By using `steps()` with an **integer**, you can define a specific *number* of steps before reaching the end. The state of the element will *not* vary gradually, but rather **jump** from state to state in separate instants.

transition

In collection: [Transitions](#) [Permalink](#) [Share](#) [Can I use](#) [MDN](#)

Shorthand property for `transition-property` `transition-duration` `transition-timing-function` and `transition-delay`.

Only `transition-duration` is **required**.

- `transition-duration` is **set to** `1s`
- `transition-property` **defaults to** `all`
- `transition-timing-function` **defaults to** `ease`
- `transition-delay` **defaults to** `0s`

Hover me

`transition: 1s linear;`

- `transition-duration` is **set to** `1s`
- `transition-property` **defaults to** `all`
- `transition-timing-function` is **set to** `linear`
- `transition-delay` **defaults to** `0s`

Hover me

`transition: background 1s linear;`

- `transition-duration` is **set to** `1s`
- `transition-property` is **set to** `background`
- `transition-timing-function` is **set to** `linear`
- `transition-delay` **defaults to** `0s`

Hover me

`transition: background 1s linear 500ms;`

- `transition-duration` is **set to** `1s`
- `transition-property` is **set to** `background`
- `transition-timing-function` is **set to** `linear`
- `transition-delay` is **set to** `500ms`

Hover me

`transition: background 4s, transform 1s;`

You can combine **multiple properties** with their own transition duration.
